1 Welcome!

Dear customer,

Thank you for choosing the physical activity sensor LightMove 3 from movisens. With this sensor, you get the newest technology for mobile monitoring of physical activity and ambient light in everyday life.

Please read this manual completely and thoroughly before bringing the measurement system into service! In this manual you will find all information relevant to the use and maintenance of the measurement system as well as for solving problems.

If you have any further questions, don’t hesitate to call us. It is our pleasure to help you:

Phone: +49 721 381344-0

E-Mail: support@movisens.com
2 Scope of Application

**LightMove 3** is a scientific research instrument designed to capture the physical activity, ambient light and other secondary parameters of a person. **LightMove 3** is designed and tailored for use in research applications.

The physical activity and Ambient Light sensor **LightMove 3** is not a medical device!

The physical activity of a person is measured by the acquisition of their acceleration across three dimensions, in addition to the atmospheric air pressure. The ambient light is detected via a color light sensor. This sensor allows the measurement of Lux, the brightness measurement over a wide range (darkness to sunlight), color temperature measurement and light source type detection (enabled by an integrated additional IR channel). In addition the ambient temperature is also acquired.

The sensor can be configured via a PC by utilizing the **Sensor Manager** software included in this package.

When used in conjunction with **DataAnalyzer** software, the **LightMove 3** allows the offline calculation and analysis of the following parameters and the generation of reports.

- Acceleration in three dimensions
- Atmospheric Air Pressure
- Temperature
- Movement Acceleration
- Acceleration along the body axis
- Inclination of body axes
In addition to the offline calculation, LightMove 3 offers the possibility of live analysis of physical activity and in conjunction with movisensXS, the software platform for experience sampling, and the Sensor Trigger the realization of interactive ambulatory assessment strategies. In live mode, the following parameters can be measured, calculated and transmitted via a Bluetooth Smart interface:

- Movement acceleration
- stateOfCharge
- stepCount
• Metabolic Equivalent of Task (MET)
• metLevel (metSedentary, metLight, metModerate, metVigorous)
• light (red, green, blue, clear, ir)

These values are transmitted with 1 value per minute. Additional live parameters will be available soon.

Tip: movisens can calculate other parameters from raw data upon request..
3 Instructions of Use

⚠ LightMove 3 is not a medical device.

⚠ Only use LightMove 3 for the designated applications.

⚠ Never open LightMove 3.

⚠ The battery of LightMove 3 may only be changed by the manufacturer.

⚠ LightMove 3 is not waterproof. Don’t use the sensor in wet environments. The sensor is protected against light splashes of water.

⚠ Only use the LightMove 3 under the specified conditions.

⚠ To charge the battery of LightMove 3, only use USB standard compatible devices.

⚠ If LightMove 3 is used with wrist strap, these have to be cleaned regularly.

⚠ If any problems occur by wearing the sensor (e.g. pressure marks, skin irritations or other discomfort), stop using it immediately.
4 Scope of Delivery and Accessories

In this chapter, you’ll learn which parts are within the scope of delivery and what accessories are available. All of these parts can be reordered. Please consider the order numbers in the following paragraph.

To be able to do measurements a PC is needed in addition to the scope of delivery.

4.1 Scope of Delivery

The following component is included in delivery:

<table>
<thead>
<tr>
<th>Article</th>
<th>Order No.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>LightMove 3</strong></td>
<td>10150</td>

### movisensXS Platinum

Experience Sampling for Android

Bundle license for 1.000.000 item results usable with unlimited number of smartphones

20112

### SensorTrigger

Solution for Interactive Ambulatory Assessment
to retrieve the sensor data on your android device and trigger forms in movisensXS.

20120

### 4.4 Complete Measurement System

A complete system for measurement and analysis of physical activity and ambient light consists of the following components:

- **LightMove 3** sensor for the objective assessment of physical activity and ambient light
- movisens **SensorManager** software to configure and read out the sensor
- **UnisensViewer** for visualization and preprocessing of sensor data and calculated results
- movisens **DataAnalyzer** software for analysis of sensor data, calculation of outcome parameters and for the creation of reports (allows the offline analysis of sensor data)
- Experience sampling platform **movisensXS** (for interactive ambulatory assessment)
- **Sensor Trigger** to retrieve the sensor data on your android device, evaluate these data with predefined and configurable algorithms and trigger forms in **movisensXS**.
A detailed description of these components can be found in the following documents:

- Online help for **UnisensViewer** ([www.unisens.org](http://www.unisens.org))
- **DataAnalyzer** User Manual
- Online help **movisensXS** ([xs.movisens.com/help](http://xs.movisens.com/help))
- **Sensor Trigger** User Manual
5 Description of the Sensor

**LightMove 3** is designed to be worn with a wrist band on the non-dominant arm.

**LightMove 3** is also equipped with a Bluetooth Smart interface. The sensor can be used in conjunction with a gateway or a mobile phone for live applications. The Bluetooth Smart interface is activated in the default configuration of the sensor. To deactivate this interface, a firmware update is required (see 6.4)

The axes of the integrated acceleration sensor are described in the following figure:
**LightMove 3** is equipped with a multi-colored LED to show the status of the sensor:

<table>
<thead>
<tr>
<th>Status-LED</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flashing red (once per second)</td>
<td>The sensor is active and records data</td>
</tr>
<tr>
<td>Flashing red slowly (every two seconds)</td>
<td>Delayed recording active</td>
</tr>
<tr>
<td>Flashing green</td>
<td>The sensor is connected to a PC or a charger. The battery is fully charged.</td>
</tr>
<tr>
<td>Flashing blue</td>
<td>The sensor is connected to a PC or a charger. The battery is charging.</td>
</tr>
<tr>
<td>Flashing magenta</td>
<td>The sensor is active and records data. It is connected to a charger and charging</td>
</tr>
<tr>
<td>Flashing yellow</td>
<td>The sensor is active, records data. It is connected to a charger. The battery is fully charged.</td>
</tr>
<tr>
<td>LED Behavior</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Flashing blue fast (three times per second)</td>
<td>The battery level is low, the sensor will turn off soon.</td>
</tr>
<tr>
<td>Flashing red fast (three times per second)</td>
<td>An error occurred. Reset sensor (see 8.5). If the sensor doesn’t stop flashing, please contact the manufacturer.</td>
</tr>
<tr>
<td>No LED active</td>
<td>The sensor is inactive.</td>
</tr>
</tbody>
</table>

Combinations of red and green blinking as well as red and blue blinking are possible with the appropriate combination of the above descriptions.

**LightMove 3** features a vibration alarm when Bluetooth is getting disconnected.
6 Software Installation

This chapter describes how to install and uninstall the software and how to update it. Beside this, the system requirements are defined.

6.1 System Requirements

Before installing the software, please check that the following system requirements are fulfilled.

- PC with one of the following Versions of Microsoft Windows: Windows 7, Windows 8, Windows 8.1, Windows 10
- USB 2.0 or USB 3.0 interface
- Administrator rights during installation
- A minimum of 300 MB free space on hard disc

The delivered software consists of two programs:

- **SensorManager**: Program to configure the sensor, to start a measurement and to download the data from the sensor.

- **UnisensViewer**: Program to view the stored data.

**Option:**

In addition to this, analysis software, android sensor trigger app and cloud service for experience sampling can be ordered as a complement to the sensor (see 0):

- **DataAnalyzer**: Program to analyze the stored sensor data.

- **movisensXS**: Experience sampling platform.

- **movisensXS Sensor Trigger**: android sensor trigger app to evaluate the analyzed data transmitted over Bluetooth smart interface.
6.2 Installing the Software

Please ensure that your PC fulfills the requirements described above.

**Step 1:** Plug the USB drive into the USB port of your PC. The content of the medium will be shown.

⚠️ If the window does not open automatically, select the appropriate drive from the window “My computer”.

**Step 2:** Double click the file “movisens_SensorManager_Setup.exe”

✅ The Installation runs automatically in the background. After successful installation, shortcuts are created in the Windows Start Menu under the entry “movisens SensorManager”.

![Image of SensorManager shortcuts]

The use of the different programs is explained in the following chapters.

**Step 3:** Double click the file “UnisensViewer_Setup_Full.exe”

✅ The Installation runs automatically in the background. After successful installation, a shortcut “UnisensViewer” is created in the Windows Start Menu.
Option:

If you ordered a licence for **DataAnalyzer**, please follow the next step. Detailed information can be found in the **DataAnalyzer** User Manual.

**Step 4:** Double click the file “DataAnalyzer_Setup_Full.exe”

✓ The Installation runs automatically in the background. After successful installation, a shortcut “movisens DataAnalyzer” is created in the Windows Start Menu.

The use of the different programs is explained in the **DataAnalyzer** User Manual.

### 6.3 Updating the Software

You need an internet connection to make an update. Select Windows Start Menu → movisens SensorManager → Updater

If a new version is available, it will be downloaded and installed automatically after starting the updater software.

### 6.4 Updating the Sensor Firmware

If the **SensorManager** contains a sensor firmware version that is newer than the firmware on the sensor, a button “Update sensor” is shown.

**Step 1:** Check that the sensor is charged.

**Step 2:** Start the update by clicking the “Update sensor” button.
Never unplug the sensor during firmware update or interrupt the firmware update process.

Special firmware versions are used to change the default configuration of the sensor, e.g. in customized sensor applications or to deactivate the Bluetooth interface. You can get these firmware versions upon request from movisens.

To install the new firmware, please start
Windows Start Menu  movisens SensorManager  Firmware Updater

You can now select the new firmware and Start the update.

6.5 Uninstalling the Software

The software can be uninstalled using the Windows Control Panel.
7 Handling

This chapter describes how to prepare a measurement and how to attach the sensor to a test person. Furthermore you get information on how to save, delete and analyze data from the sensor.

A typical usage scenario for the assessment of data and offline analysis is shown in the following diagram. The relevant software for each step is indicated on the left side of the diagram.

The different steps are described in further detail in the chapters indicated on the right of the diagram.
If you want to use the sensor in combination with the experience sampling platform **movisensXS**, the different steps to use the sensor are shown in the following figure. Unlike the offline measurement, the measurement is initiated on your mobile device.

The right side of the diagram illustrates the process to prepare and run a study on **movisensXS**.

To retrieve the data from the **LightMove 3**, you have to read out the sensor after the measurement. The results of **movisensXS** only contain the sensor information that causes a trigger.
7.1 Charging the Sensor

**Step 1:** Connect the cradle with the USB cable to a USB port (USB port of your computer or another port that conforms to USB standard like USB hub or USB charger). Attach the sensor with the help of the push buttons at the cradle. Please make sure that the 4 contacts are connected (marked red in the picture). To charge multiple sensors at the same time, we suggest using a USB hub (see 4.2).

![Sensor with red contacts highlighted](image)

- After connecting the sensor to a USB port, the charging process starts immediately. During charging, the status LED is blinking blue. If the battery is fully charged, the LED is blinking green. The charging process of the sensor can take up to two hours, depending on the battery status of your sensor.

- If the sensor is fully charged, the battery run time during recording is 9 days.

**Step 2:** To extend the measurement duration you can recharge the sensor during a measurement.

- If recharging while taking a measurement be sure **NOT** to plug it into your PC as that will stop the measurement. Instead use a USB charger.
When recharging the sensor you have to ensure that the battery is fully charged (until the sensor is blinking yellow).

Tip:

If the sensor should be recharged by the test person, you can define a regular time (e.g. during night or during taking a shower in the morning) when they can plug the sensor to a USB charger.

⚠️ To be sure that the sensor is not running out of battery, you must advise the test persons to recharge the sensor every day until it is blinking yellow. The time for **daily recharging** the sensor is **about 15 minutes**.

If you recharge the sensor regularly you can make a measurement up to the 2 month maximum recording capacity of the sensor.

If the sensor runs out of battery lifetime during a long measurement, the recording of data will be stopped. The measurement won’t be continued even if you connect it to a charger.

If the sensor is discharged completely (e.g. after a long period where it was not used), it can take up to several minutes until the sensor reacts and can be identified by the computer.

You can control the battery status before the measurement with the sensor manager, see the following section.
7.2 Preparing a Measurement

Before conducting a measurement please make sure you installed the software as described in chapter 6.2.

Step 1: Start the **SensorManager** by selecting Windows Startmenu → movisens SensorManager → SensorManager

✓ **SensorManager** is now searching for available sensors.

![SensorManager searching for sensors](image1)

Step 2: Connect **LightMove 3** with your PC using the cradle.

✓ The software will automatically detect the device and open the following window:

![LightMove 3 window](image2)
This application shows information about sensor hardware, sensor state and sensor configuration.

Before you start a measurement please check the charging status of the battery. The maximum measurement duration can only be reached when the battery is fully charged.

⚠️ When connecting for the first time allow up to 30 seconds for the device to be detected as it installs the driver.

7.3 Starting a Measurement

To start a measurement, please perform the following steps:

Step 1: In the SensorManager software click on the “Start Recording” button in the lower left of the window.

✓ You can see the following window:

![Measurement configuration window](image)

Step 2: Please supply the following information into the text fields:
- Measurement duration: The maximum measurement duration of the LightMove 3 is about 9 days without recharging the sensor. (see 7)

- Start time: You can start the measurement immediately or delayed at a specific time. If you want to start your measurement delayed please specify date and time. The given time should not be more than 2 days from now as the maximum measurement duration can be influenced.

**Step 3:** Start the measurement by clicking the “Start” button.

✓ You will see the following window:

![Window showing the recording started and instruction to remove the sensor from USB port.](image)

**Step 4:** Please follow the instructions and remove the sensor from the PC.

✓ The status LED will flash red once per second as soon as the measurement has started and data will be recorded. If a delayed start was configured the LED flashes red every two seconds until the measurement starts.

✓ At the end of the measurement the LED stops flashing.

⚠ If you reconnect the sensor after starting a measurement again with a PC, the measurement will be stopped prematurely.

⚠ If you connect the sensor to a USB charger, the measurement won’t be stopped. That means you can
extend the measurement duration by intermittently charging the sensor during a measurement (see 7).

7.4 Attaching the Sensor to the Test Person

Use the wrist band to attach the sensor to the non-dominant hand of the test person. At this position only simple parameters like Movement Acceleration can be measured.

Depending on the position of the sensor, different parameters can be analyzed after the measurement.

The following figure and table lists the possible sensor locations supported by the analysis software DataAnalyzer and the
parameters that can be computed. For more details refer to the user manual of the **DataAnalyzer**.

![Sensor positions for LightMove 3](image)

<table>
<thead>
<tr>
<th>Sensor location</th>
<th>Movement acceleration</th>
<th>Activity class</th>
<th>Body position</th>
<th>Energy expenditure</th>
</tr>
</thead>
<tbody>
<tr>
<td>right, left wrist</td>
<td>✓</td>
<td>✓</td>
<td>-</td>
<td>(✓)</td>
</tr>
</tbody>
</table>

### 7.5 Stopping a Measurement

The measurement will automatically be stopped, if the configured measurement duration has passed.

A running measurement will also be stopped when:

- The sensor is connect to a PC
- The end of the battery run time has been reached
If the battery is low, this is indicated by fast blue flashing (three times per second). The sensor will then turn off soon.

7.6 Storing Measurement Data

The measurement data of the sensor is stored as raw data (e.g. the acceleration data as it is measured). The data is not processed or aggregated neither in the sensor nor in the SensorManager software. That allows you to have a sustainable database with all the raw data of your study that can be used with future studies and with future algorithms.

To store recorded measurement data on the PC do the following steps:

**Step 1:** Start the SensorManager by selecting
Windows Start menu  movisens SensorManager  SensorManager

**Step 2:** Connect LightMove 3 to the PC using the USB cable.

✓ After the SensorManager has detected the connected sensor, the following windows will be shown:
Step 3: Click on „Save Data“.

✓ You will see the following window:
Step 4: Please type in the following information:

- Select the base folder, where your measurements should be stored. To do this, click the button after the text field.

- Type in the ID of the measurement. If you want to use date and time in the ID click the button after the text input field.

- If the measurement data shall be further processed with the movisens **DataAnalyzer** the additional information about the person and the sensor location is mandatory.

Step 5: Finally click on „Save data”

The measurement data will be stored either in the unisens format or as a .csv file. Unisens is an open data format for multi sensor data. You can find further information about unisens here: 
[www.unisens.org](http://www.unisens.org)
A unisens data set consists of a meta file (unisens.xml) and different data files for each measurement signal. If you select to store data in unisens format, the following files will be generated:

- acc.bin
- light.bin
- movementacceleration.bin
- press.bin
- stateofcharge.bin
- stepcount.bin
- temp.bin
- unisens.xml

movementacceleration.bin is the result of the live analysis on the sensor, the other .bin files are the raw data of the other measurement parameters.

If you select to store data in .csv format, the following files will be generated:
 ✓ The software confirms the end of data storing process. The following window is shown:

To view recorded measurements click on “Show data” directly after storing the data.
To view previously stored measurements use Windows Explorer to navigate to your measurements folder and then open the folder with the desired ID. Then double click on the “unisens.xml” file. The measurement will then be shown in the **UnisensViewer**:

A first preprocessing of the data can be done with **UnisensViewer**. You can crop your signal to the desired time, set markers and annotate artefacts. Details can be found in the online help of **UnisensViewer**.

**Tip:**

Directly after storing the data you should check if the measurement is complete and correct. You can check visually if all signals are recorded for the full measurement duration and if the signals are of high quality.
You directly start the analysis of the data with DataAnalyzer by clicking the “Analyze Data” button.

Tip:
Before changing the data of your study, be sure to have a copy of your raw data.
7.8 Analyzing Data

Option:

To analyze the data, movisens offers the modular analyzing software DataAnalyzer. This product is a scientific software for the analysis of physiologic measurement data. The software is optimized for, but not limited to use with sensors from movisens.

With the help of DataAnalyzer you can calculate secondary parameters from your physiologic measurement data, create summaries and reports. DataAnalyzer is capable of batch-processing complete measurement data bases.

After a measurement was selected all possible analysis outputs (secondary parameters and reports) are shown. The list of analysis outputs is dependent on your licensed modules and the data contained in your measurement. You can now select the desired analysis output. If you want to select more than one analysis output keep the Ctrl-key pressed while selecting.
The results of the analysis are stored as a unisens data set. A unisens data set consists of a meta file (unisens.xml) and additional data files for each measurement signal and secondary parameter. Secondary parameters are stored as a .csv file within the unisens data set and can also be processed e.g. with Microsoft Excel or SPSS.

Tip:

*movisens* can also analyze your raw data and generate reports according to your needs. If you have any further questions, please do not hesitate to contact us.
8 Maintenance and Proper Disposal

8.1 Maintenance

Besides charging the batteries, LightMove 3 does not need any further maintenance. The battery capacity will decrease slowly with charging cycles and age. The battery can only be changed by movisens®. Please contact us in the case when a replacement is necessary.

8.2 Cleaning Instructions

If you want to clean LightMove 3, please note the following:

- Disconnect the sensor from USB cable and wrist band.
- Use a soft slightly moistened cloth.
- Take care that no humidity enters the sensor housing.

8.3 Cleaning of Wrist Bands

To clean the wrist bands please consider the following:

- Wash the bands by hand and not in the washing machine.
- Use a mild liquid detergent.
- Directly after washing, air-dry the bands before storing or using it for new measurements.

8.4 Proper Disposal
**LightMove 3** is subject to the EU directive WEEE (Waste Electrical and Electronic Equipment). Please consider your local regulations for waste disposal.

![WEEE symbol](image)
